

ASSUALT WEAPONS. Do you know what they are?

At one time they referred to automatic weapons that could fire a large number of bullets fast. We normally called them machine guns. However today the gun control people classify semi-automatics as assault weapons and want to ban them. With an automatic weapon you pull the trigger the gun will continue firing until the trigger is released. By the way it is illegal to own a fully automatic weapon without a special permit. With a semi-automatic, which includes almost all the guns we own, the trigger has to be pulled every time for the gun to fire

Using the definition advocated by the gun control lobbyists it would cover almost all the rifles and hand guns. Yet they say hunters and target shooters don't have to worry, but we've heard that message before.
